EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science and Engineering

September 2022 - Ongoing

CGPA: 7.39 /10

TECHNICAL SKILLS

Programming Languages: Java, Python, C++, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Flask, FastAPI,

Databases & Cloud: MongoDB, MySQL, Git, GCP, AWS, RESTful APIs

PROFESSIONAL EXPERIENCE

The Brick and Bolt

January 2025 – July 2025

Software Developer Intern

- Developed an OCR-driven ingestion pipeline to digitize scanned receipts and invoices, extracting structured line-item data and reducing manual entry effort for internal finance operations.
- Applied an LLM to interpret extracted fields and auto-classify expenses into spending categories, achieving ~92% accuracy and streamlining downstream financial reporting.

PROJECTS

NyayGram | *Python, LangChain, LlamaIndex, Milvus, Ollama, Groq, Streamlit*

Nov 2025 – Apr 2026

- Built a local-first hybrid-RAG agent using LangChain orchestration with dense (Milvus) + sparse (BM25) retrieval; eliminated hallucination via citation-grounded responses.
- Implemented prompt engineering templates and a confidence-density scoring layer; auto-flags low-confidence answers, improving answer reliability by design.
- Integrated Ollama local LLM inference with Groq cloud fallback inside a Streamlit dashboard; supports PDF/Markdown/JSON corpora with fingerprint-based incremental ingestion.

DriveKaro | *React.js, Node.js, MongoDB, Stripe API*

March 2025 - June 2025

- Car Rental Platform developed as a full-stack rental system for a limited number of users with JWT authentication, live booking functionality, and Stripe-based payment integration
- Built responsive React frontend with Redux state management to streamline the booking flow and manage application state effectively
- Deployed Node.js backend with secure MongoDB database, handling daily rental and payment requests reliably

PennyPilot | *React.js, MongoDB, Node.js, Chart.js*

December 2024 - January 2025

- Developed a full-stack expense management application with JWT authentication and real-time wallet balance updates
- Created a responsive React dashboard with CRUD operations to allow users to manage expenses across different categories
- Configured MongoDB database with role-based access control and RESTful APIs for secure data handling

Pothole Detection System | *Flutter, OpenCV, Dart*

July 2024 – April 2025

- Engineered a cross-platform mobile and desktop application for real-time pothole detection using OpenCV and device sensors
- Integrated Python and Java for backend logic, geolocation processing, and automated reporting with consistent detection accuracy
- Implemented GPS-based location tagging to map detected potholes and contribute to a centralized reporting system with proper website

ACHIEVEMENTS AND INTERESTS

Technical Achievements: Solved 150+ Data Structures and Algorithms problems on LeetCode

Certifications: Google The Bits and Bytes of Computer Networking, Oracle MySQL HeatWave Implementation, Oracle Data Science Professional

Interests: Outdoor Sports, Technical Writing, Listening Music
